GreenCanvas

INTEGRAL / EXPANSIVE COMPONENT / JOINTLESS, CURLESS

CREATING THE OPTIMUM CONCRETE CANVAS

GreenCanvas Expansive Component - Is a cementitious inorganic powder, when added to a standard concrete mix, will produce a shrinkage compensating concrete. GreenCanvas is a specialty expansive component classified by type based on the chemical mechanism used to obtain expansion in the concrete matrix during the curing process, TYPE G. Additionally, it will greatly reduce joints for contraction. GreenCanvas will increase longevity, increase durability, tensile strength, and water tightness of the finished concrete placement. Structure design, concrete mix design, and placement guidance is governed by (ACI) document ACI 223 "Guide for the Use of Shrinkage Compensating Concrete". GreenCanvas is versatile, sustainable, and economical.

"GIVING YOU THE DIRECTION YOU NEED."

INITIATIVE INSIGHT SPECIFICATION

Good direction grows when CONSULTANTS show initiative. Design professionals, owners, and contractors need someone who is willing to take the initiative in connecting you with the solutions for sustainable concrete. We freely share concrete insight by investing in our industry with Continued Education Presentations created for the design professionals, general contractors, and craftsmen. We can assist you in understanding past project failures, helping you build your specifications for future success. With all the products needed on a project, it is essential to have someone "Giving the Direction you Need ".
